ROWMARK EXPANDS FACILITY IN FINDLAY, OHIO

Rowmark[®] is pleased to announce the completion of a major expansion project to increase manufacturing capacity of our facility in Findlay, Ohio. The project included a 10,000 square foot addition to the extrusion area and raw materials warehouse as well as the addition of two new storage silos. The project began with groundbreaking in December and was officially declared complete on March 18.

“We are extremely happy to be adding this space to our production facilities,” said Jeff Hook, Director of Operations. “We pride ourselves on having an outstanding plastics manufacturing facility. This new area will allow us to be efficient with our material handling and continue to aid in our already world-class inventory control processes.”

The new area will be used primarily for extrusion staging and die maintenance, as well as raw materials storage, which includes a racking system complete with RF bar coding for inventory accuracy.
